

/// CURRENT MONITORS

ATC-Diversified Electronics has a Current Monitor available to fit almost any monitoring application. The operation of the CM Series, AC Current Monitor/Relays, is based on an internal current transformer magnetically coupling the solid state sensing circuitry to the line being monitored. The operation of the CD Series, DC Current Monitor/Relays, is based on an internal Hall-effect device with a magnetic concentrator coupling the solid state sensing circuitry to the line being monitored. When the monitored current reaches a preset threshold point, an internal relay switches. The

heavy duty contacts are used for instrumentation or signaling alarm circuits. The current sensing range of the ATC-Diversified Electronics AC Current Monitor/Relays can be increased by the use of an external Current Transformer. With the use of external Current Transformers you can monitor the current on almost any application. The feature matrix below shows the Current Monitor Series available from ATC-Diversified Electronics and highlights their features and specifications.

/// TYPICAL APPLICATIONS

The following are some typical applications for ATC-Diversified Electronics Current Monitors:

- Sense current demand level
- Run time totalizer
- Detect conveyor load jam
- Detect heater element failure
- Detect the use of dull bits or blades
- Detect runway lights and radio tower light failures
- Remote motor sensing
- Sense load loss
- Detect broken fan belts or chains
